

Flat Cut Off Wheels  
 PFERD cut-off wheels are specially engineered for high performance cutting.

Depressed Center Wheels  
 FLAT TYPE: General purpose grinding wheel, for use on air and electric hand held grinders.

SAUCER TYPE: This shape provides 2-1/2 times greater strength than standard flat type depressed center wheels. May be used almost flat, which reduces operator fatigue and edge chipping.

CUP TYPE: For optimum performance, wheel should be used on powerful grinders due to large surface contact area. High concentration of abrasive grain ensures an aggressive cutting action.
